FOR LIVESTOCK

Gentle Care for
Healthy & Productive Livestock

CERTIFIED ISO 9001:2015 CERTIFIED

GOOD MANUFACTURING PRACTICE GMP CERTIFIED GOOD MANUFACTURING PRACTICE

Jovi Care is a scientifically formulated supportive care product designed to help manage oral and mucosal lesions associated with Foot-and-Mouth Disease (FMD) and Lumpy Skin Disease (LSD) in livestock. Stomatitis refers to inflammation of the oral mucosa and may be characterized by reduced or complete loss of appetite, lip smacking, excessive salivation, and discomfort while feeding. Oral lesions may occur in several infectious conditions, including FMD, PPR, BVD, actinobacillosis, actinomycosis, necrobacillosis, bluetongue, and fungal infections, as well as due to physical or chemical irritants.

FMD is a highly contagious viral disease affecting cattle, pigs, sheep, goats, and other susceptible animals, commonly associated with fever and vesicular lesions of the mouth, feet, and udder. LSD, caused by Lumpy Skin Disease Virus (LSDV) of the genus Capripoxvirus, may cause fever, skin nodules, edema, nasal and ocular discharge, reduced milk production, weight loss, and secondary infections, leading to significant production and economic losses.

Since specific curative treatment for these viral diseases is generally unavailable, supportive management plays an important role in maintaining animal comfort, hydration, nutrition, and recovery. Jovi Care, a combination of vitamins, minerals and glutamic acid, provides nutritional and supportive care to help maintain oral tissue integrity, support recovery from aphthous lesions, and promote overall recovery and vitality during disease-associated stress.

Economic losses of FMD & LSD are due to:

- High mortality in young animals
- Permanent impairment of milk production
- Cost of annual & emergency vaccination
- Trade embargo on animal products
- Permanent loss of weight
- Cost of treatment
- Loss of draught power

Composition:
Each 100 gm contains:
Vitamin C — 500 mg
Copper — 100 mg
Glutamic Acid — 500 mg
Vitamin E — 200 mg
Zinc — 300 mg
Cobalt — 12.5 mg
Selenium — 52.5 mg

Indication
Aphthous lesions, thyroid imbalance, hypertrichosis, ptyalism, and after-effects of FMD & LSD leading to infertility and panting.

Pack Size
25 Kg bag

Dosage & Administration
Jovi Care should be administered through feed, ensuring uniform distribution throughout the feed for consistent intake.

The recommended dosage is 5–10 g per 100 kg of feed, depending on the intended application and feeding requirements.
